QUALITY FOR LIFE

AMASIS

1 OVERSIZES TUBES:

The frame is designed with large diameter tubes for optimum stiffness, to achieve the stiffest possible frame that transfers the arm power of the athlete into speed.

2 THE FRAME:

The frame is tailor made to the user.

3 FRICTION LOCK:

Your competitors will envy you this friction lock, which ensures that the friction adjustment of the track steering remains constant lap after lap.

Amasis is delivered as custom built only, tailored to the athlete's individual wishes and needs.

Shown with Corima carbon disc wheels (optional). Available in black, blue or silver anodized.

Amasis

With a super light and stiff frame made of 7020 aluminum the Amasis is the ultimate answer to maximum transfer of the athlete's arm power into speed – on the track or at the marathon course. Amasis was the choice of 17 athletes at the Paralympic Games in Athens 2004, with a total winning of 13 medals. The long list of victories for the Amasis racing wheelchair also includes a world record on the 400 meter, set by Frenchman Pierre Fairbank in May 2004.
